		<ul style="list-style-type: none"> <li>• <math>\cos(90 + \theta) = -\sin \theta</math></li> <li>• <math>\sin(180 - \theta) = \sin \theta</math></li> <li>• <math>\sin(180 + \theta) = -\sin \theta</math></li> <li>• <math>\cos(180 - \theta) = -\cos \theta</math></li> <li>• <math>\cos(180 + \theta) = -\cos \theta</math></li> </ul> <p><b>Logrithm:</b></p> <ul style="list-style-type: none"> <li>• <math>\log(mxn) = \log m + \log n</math></li> <li>• <math>\log \frac{m}{n} = \log m - \log n</math></li> <li>• <math>a^x = N</math>, Then <math>\log_a N = x</math></li> </ul> <p><b>Limits:</b></p> <ul style="list-style-type: none"> <li>• Consider the function <math>f(x)=x^2</math> observe that as x takes values very close to 0 the value of f(x) also moves towards 0. We say  <math display="block">\lim_{x \rightarrow 0} f(x) = 0</math>                     [To be read as limit of f(x) as x tends to 0 equals 0]                      The limit of f(x) as x tends to 0 is to be thought of as the value of f(X) should assume at x=0.                      In general as <math>x \rightarrow a, f(x) \rightarrow l</math> then l is called limit of function f(x) which is symbolically written as  <math display="block">\lim_{x \rightarrow 0} f(x) = l</math> </li> </ul> <p><b>For Practice:</b></p> <ul style="list-style-type: none"> <li>(i) Find value of <math>\cos 210^\circ</math>.</li> <li>(ii) Find value of <math>\sin 240^\circ</math>.</li> </ul>	
CONTENT/GIST/ CONCEPT/POINTS OF SYLLABUS	LEARNING OBJECTIVE	LEARNING ACTIVITY/EXERCISE BY TEACHERS/ STUDENTS	LEARNING OUTCOME
<p><b>DAY 2</b></p> <p>Basic concepts of graphs</p>	<p>To make the students aware about the different types of graph and identification of graphs on the basis of algebraic expressions.</p>	<p><b>Graphs :</b> A diagrammatic representation of variation of one quantity with respect to another is called a Graph.</p> <p><b>Main Points</b></p> <ul style="list-style-type: none"> <li>• From shape of graph we can have clear idea about the relationship between two quantities represented by it.</li> <li>• If graph is a straight line and passes through the origin, it is of the form <math>y=mx</math>. A straight line graph having positive or negative intercepts on y axis is represented by <math>y = mx \pm c</math></li> <li>• The slope of the graph and its intercepts on x or y axis gives us the values of physical quantity.</li> </ul>	

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

<b>Differentiation</b>			<p>The students will be able to derive the different formulae of physics with help of Calculus and also be able to apply the same while solving the numerical.</p>
<b>Integration</b>		<ul style="list-style-type: none"> <li>• With the help of graph we can determine mean value from a large no. of observations.</li> <li>• Graph for straight line equation.</li> </ul> <div style="background-color: #fff9c4; padding: 10px; margin: 10px 0; text-align: center;">  </div> <ul style="list-style-type: none"> <li>• Graph for parabolic equation</li> </ul> <div style="text-align: center; margin: 10px 0;">  </div> <p>The general equation of parabola is <math>y = ax + bx^2</math></p> <ul style="list-style-type: none"> <li>• The equation for circle is <math>x^2 + y^2 = a^2</math></li> <li>• The equation for ellipse is <math>\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1</math></li> </ul>	

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

## Basic Calculus : Differentiation

Rate of change of a physical quantity with respect to some variable is differentiation.

$$y = f(x) \Rightarrow \frac{dy}{dx} = \text{Rate of Change of } y \text{ w.r.t } x = \text{differential coefficient of } y \text{ w.r.t } x$$

Ex: Velocity = Rate of change of displacement

$$\text{Or } v = \frac{dx}{dt}$$

Acceleration = Rate of change of velocity

$$\text{Or } a = \frac{dv}{dt}$$

## Formulae :

- $\frac{d}{dx}(x^n) = nx^{n-1}$
- $\frac{d}{dx}(\sin x) = \cos x$
- $\frac{d}{dx}(\cos x) = -\sin x$
- $\frac{d}{dx}(\log x) = \frac{1}{x}$
- $\frac{d}{dx}(e^x) = e^x$
- $\frac{d}{dx}(u \times v) = u \times \frac{dv}{dx} + v \times \frac{du}{dx}$
- $\frac{d}{dx}(u / v) = (v \times \frac{du}{dx} - u \times \frac{dv}{dx}) / v^2$

Integration: Integration means summation

## Formulae :

- $\int x^n dx = \frac{x^{n+1}}{n+1}$
- $\int \sin x dx = -\cos x$
- $\int \cos x dx = \sin x$
- $\int (u + v) dx = \int u dx + \int v dx$

## Definite Integration:

$$\text{If } \frac{d}{dx} f(x) = f'(x) \text{ then } \int_b^a f'(x) dx = f(a) - f(b)$$

## Exercise for Students:

- Evaluate

$$\int_0^{\pi/4} \sin 2x dx$$

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

CONTENT/GIST/CONCEPT/POINTS OF SYLLABUS	LEARNING OBJECTIVE	LEARNING ACTIVITY/EXERCISE BY TEACHERS/ STUDENTS	LEARNING OUTCOME																																																																	
<p><b>DAY 3</b></p> <p>Derived S.I. Units, Greek Alphabets, fundamental constants, Decimal multiples and sub-multiples and conversion of units from one system to another system.</p>	<p>1. ## KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

Gravity		
Avogadro Constant	$N_A$	$6.023 \times 10^{23} \text{ mol}^{-1}$
Electronic Charge	$e$	$1.6 \times 10^{-19} \text{ C}$
Electronic rest mass	$m_e$	$9.1 \times 10^{-31} \text{ Kg}$
Rest mass of Proton	$m_p$	$1.672 \times 10^{-27} \text{ Kg}$
Rest mass of Neutron	$m_n$	$1.674 \times 10^{-27} \text{ Kg}$
Speed of Light	$c$	$3.0 \times 10^8 \text{ m/s}$

### **Decimal Multiples and Sub-multiples to be used in S.I. Units**

Sub-multiples/Multiples	Prefix	Symbol
$10^{-1}$	deci	d
$10^{-2}$	centi	c
$10^{-3}$	milli	m
$10^{-6}$	micro	$\mu$
$10^{-9}$	nano	n
$10^{-12}$	pico	p
$10^{-15}$	femto	f
10	deca	da
$10^2$	hecto	h
$10^3$	kilo	K
$10^6$	mega	M
$10^9$	Giga	G
$10^{12}$	Tera	T

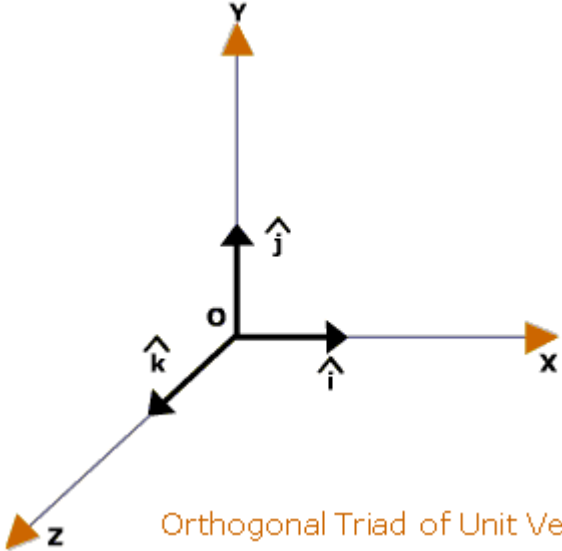

### **Fill in the blanks by suitable conversion of units**

$$\begin{aligned}
 G &= 6.67 \times 10^{-11} \text{ Nm}^2 / \text{Kg}^2 = \text{-----} \text{ cm}^3 \text{ s}^{-2} \text{ g}^{-1} \\
 &= 6.67 \times 10^{-11} (\text{kg} \cdot \text{ms}^{-2}) \text{m}^2 \text{Kg}^{-2} \\
 &= 6.67 \times 10^{-11} \text{Kg}^{-1} \text{m}^3 \text{s}^{-2} \\
 &= 6.67 \times 10^{-11} \times (1/1000) \text{g}^{-1} (10^6 \text{cm}^3) \text{s}^{-2} \\
 &= 6.67 \times 10^{-8} \text{g}^{-1} \text{cm}^3 \text{s}^{-2} \text{Ans.}
 \end{aligned}$$

### **For Practice:**

- $1 \text{ Kg m}^2 \text{ s}^{-2} = \text{-----} \text{ g cm}^2 \text{ s}^{-2}$
- $3 \text{ ms}^{-2} = \text{-----} \text{ Km h}^{-2}$

CONTENT/GIST/CONCEPT/POINTS OF SYLLABUS	LEARNING OBJECTIVE	LEARNING ACTIVITY/EXERCISE BY TEACHERS/ STUDENTS	LEARNING OUTCOME
<p><b>DAY 4</b></p> <p>Basic Concepts of Vector</p>	<p>1.To recapitulate Vector Concepts 2.To understand the application of vectors to find the direction of different vector quantities like Force, Field Intensities etc.</p>	<p><b>Key Points to Remember</b></p> <ol style="list-style-type: none"> <li>All the measurable physical quantities can be divided into two classes: <ul style="list-style-type: none"> <li>Scalars</li> <li>Vectors</li> </ul> </li> <li>Scalars – The physical quantities having magnitude but no direction. Ex- Speed, length, mass etc.</li> <li>Vectors - The physical quantities having both magnitude and direction. Ex- Velocity, Acceleration, Momentum etc.</li> <li>Vectors can be added, subtracted and multiplied but cannot be divided by another vector.</li> <li>Orthogonal unit vectors :</li> </ol> <div style="text-align: center;">  <p style="color: orange; text-align: center;">Orthogonal Triad of Unit Vectors</p> </div> <ol style="list-style-type: none"> <li>Unit Vectors – Has magnitude one</li> </ol> $\hat{a} = \frac{\vec{a}}{ \vec{a} }$ <ol style="list-style-type: none"> <li>Resultant of two vectors <b>P&amp;Q</b> inclined at an angle <math>\theta</math></li> </ol>	<p>Vector concepts will lead students to understand basic concepts of electric and magnetic fields.</p>

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

$$R = \sqrt{P^2 + Q^2 + 2PQ \cos \theta}$$

$$\phi = \tan^{-1} \left[ \frac{Q \sin \theta}{P + Q \cos \theta} \right]$$

8. A vector inclined at an angle with the horizontal can be resolved into two rectangular components has

9. A vector can be expressed as

$$\vec{A} = A_x \hat{i} + A_y \hat{j} + A_z \hat{k}$$

$$\vec{B} = B_x \hat{i} + B_y \hat{j} + B_z \hat{k}$$

10. Dot Product or Scalar Product

$$\vec{A} \cdot \vec{B} = AB \cos \theta$$

$$\mathbf{i} \cdot \mathbf{i} = \mathbf{j} \cdot \mathbf{j} = \mathbf{k} \cdot \mathbf{k} = \cos 0 = 1$$

$$\mathbf{i} \cdot \mathbf{j} = \mathbf{j} \cdot \mathbf{k} = \mathbf{k} \cdot \mathbf{i} = \cos\left(\frac{\pi}{2}\right) = 0$$

11. Cross Product or Vector Product

$$\mathbf{a} \times \mathbf{b} = |\mathbf{a}||\mathbf{b}|\sin\theta$$

## KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

		$\hat{i} \times \hat{j} = -\hat{j} \times \hat{i} = \hat{k}$ $\hat{j} \times \hat{k} = -\hat{k} \times \hat{j} = \hat{i}$ $\hat{k} \times \hat{i} = -\hat{i} \times \hat{k} = \hat{j}$ $\hat{i} \times \hat{i} = \hat{j} \times \hat{j} = \hat{k} \times \hat{k} = 0$ <p><b><u>For Practice:</u></b> Two problems one related to dot product and another related to cross product will be solved with the help of students.</p>	
<b>CONTENT/GIST/CONCEPT/POINTS OF SYLLABUS</b>	<b>LEARNING OBJECTIVE</b>	<b>LEARNING ACTIVITY/EXERCISE BY TEACHERS/ STUDENTS</b>	<b>LEARNING OUTCOME</b>

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

## DAY 5

Basic concepts in Mechanics.

To make the students a quick revision of the concepts and formulae of Mechanics.

To make the students able to apply the formulae in the derivations of different formulae of electrostatics and magnetism.

- **MOTION** – An object is said to be in motion if it changes its position w.r.t. time.
- **INERTIA** – Resistance to change.  
A body cannot change its state of motion on its own. External force is required to change the state of motion.
- Discussion of Laws of Motion and Equations of Motion.
- Calculation of acceleration from Newton’s second law.
- **COUPLE OF FORCE**- A pair of equal and opposite forces having different lines of action. It produces rotation without translation.
- **TORQUE** – Turning effect (Analogue of force in rotational motion) of force.

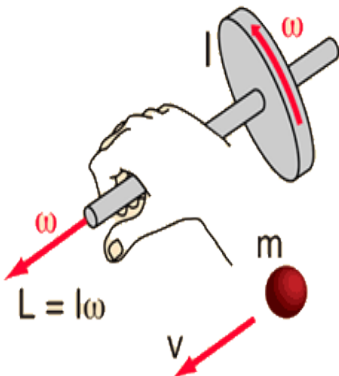

- **Work in rotational motion** –  $W = \int \tau \cdot d\theta$
- **Moment of Inertia** –  $I = \sum mr^2$ , [ Analogue of mass in rotational motion]
- **Angular Momentum** -  

$$\vec{L} = \vec{r} \times \vec{p}$$
 [Moment of momentum]

This activity/ exercise will give clarity to students to understand some “difficult to understand” concepts of mechanics.

The students enable themselves to understand the cause and effect different types of fields.

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

Angular Momentum = Moment of Inertia  $\times$  Angular Velocity

$$L = I \times \omega$$

Linear Momentum = Mass  $\times$  Velocity

$$p = m \times v$$

The  $\times$  implies simple multiplication here.

Turning movement of a particle about axis of rotation.

- **Gravitational Field**-It is space around a mass or an assembly of masses over which it can exert gravitational forces on other masses.
- **Gravitational Field Strength**-Gravitational Field strength at a point in the gravitational field is the force experienced by a unit mass placed at that point.It is directed towards the particle producing the field.
- **Gravitational Potential**-Gravitational Potential at a point in the gravitational field is the amount of work done in bringing a unit mass from infinity to that point.

**For Practice:**

- Write down the formula for work done in rotatory motion.
- In the equation  $= \frac{dJ}{dt}$ ; if  $\tau$  is torque, then what is the unit of J?

CONTENT/GIST/CONCEPT/POINTS OF SYLLABUS

LEARNING OBJECTIVE

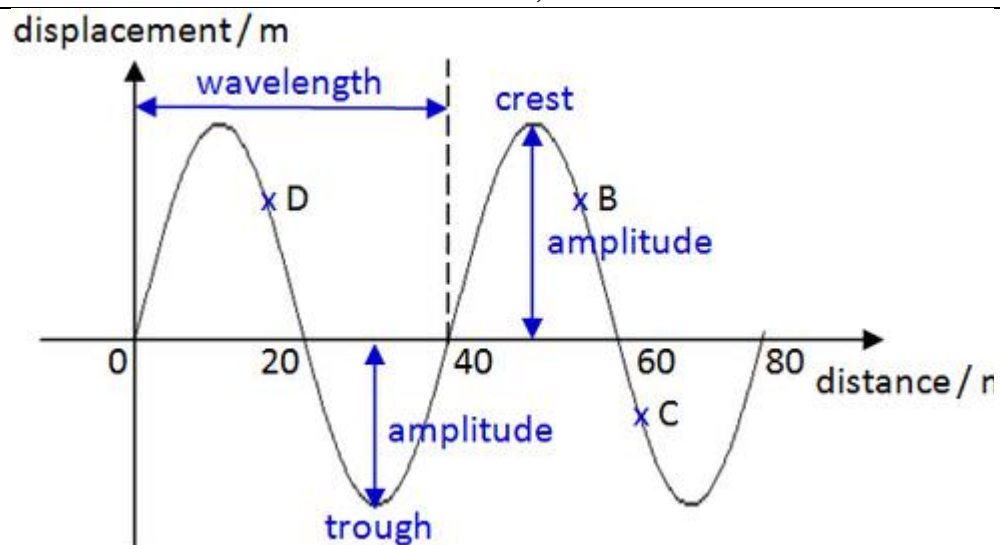

LEARNING ACTIVITY/EXERCISE BY TEACHERS/ STUDENTS

LEARNING OUTCOME

## KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

<p><b>DAY 6</b> Basic concepts of waves and oscillations.</p>	<p>To let students to learn basic concepts of waves and oscillatory motions.</p>	<ul style="list-style-type: none"> <li>• <b><u>OSCILLATORY MOTION</u></b> :Periodic to and fro motion about mean position. (Discussion on terms – Amplitude, Time Period, Frequency , Angular Frequency , Wavelength)</li> <li>• <b><u>Phase</u></b> : The quantity that expresses the state of motion i.e. position and direction of motion of a particle at an instant with reference to a given point.</li> <li>• <b><u>Relation between Phase difference and Path difference</u></b> Phase difference = <math>\frac{2\pi}{\lambda}</math> X Path difference (Derivation required)</li> <li>• <b><u>Free Oscillations</u></b>:The oscillations without outside interference are free oscillations.</li> <li>• <b><u>Forced Oscillations</u></b>:The oscillations which are compelled to take place with a frequency other than the natural frequency.</li> <li>• <b><u>Resonance</u></b> :Phenomenon of reducing an oscillation in a system by the influence of an external periodic force having the same frequency as that of natural frequency of the system. Amplitude of oscillation becomes maximum at resonance.</li> <li>• <b><u>Waves</u></b> :A kind of disturbance.             <ol style="list-style-type: none"> <li>1. A kind of disturbance which travels through a medium without any net transport of medium is called a mechanical wave.</li> <li>2. Electromagnetic Waves – These waves need no medium to travel.</li> </ol> </li> <li>• Mechanical Waves are of two types –             <ol style="list-style-type: none"> <li>1. Longitudinal</li> <li>2. Transverse</li> </ol> <p>(Discussion on longitudinal and transverse waves)</p> </li> <li>• <b><u>Graphs</u></b> :Displacement – distance graph in a wave.</li> </ul>	<p>Students will be able to apply the previous knowledge of wave &amp; oscillations in understanding the electromagnetic waves, Alternating Currents and wave optics.</p>
---	--	--	---

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

Displacement – time graph in a wave.

**For Practice :-**

- The amplitude of a body performing simple harmonic motion is 1.5 m. Write down the distance covered and displacement of body after 1 complete oscillation.
- Natural frequency of musical instrument is 256 Hertz. When in oscillation a periodic force of 300 Hertz frequency is applied on it, what will be effect on amplitude of oscillations?

SYLLABUS**

**LEARNING  
OBJECTIVE**

**LEARNING ACTIVITY/EXERCISE BY TEACHERS/ STUDENTS**

**LEARNING OUTCOME**

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

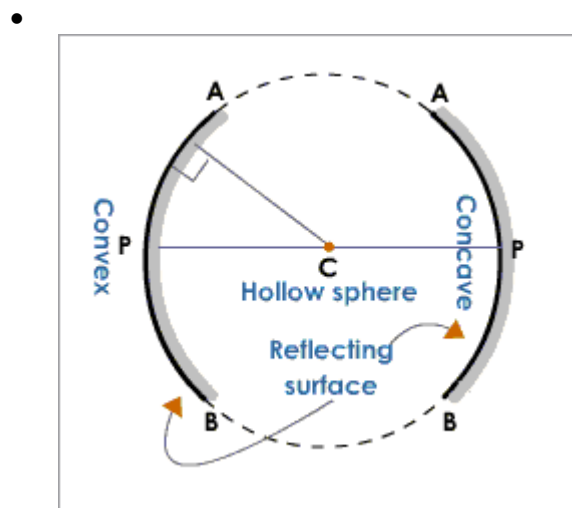

## DAY 7

Reflection from Spherical Mirrors & Image formation.

Basic concepts of Optics Ray diagrams and Image formations.

To enable the students to understand the concepts of image formations by spherical mirrors and lenses.

To develop a "connect" between previous knowledge of optics and the 'ray optics' of Class XII.

Students will draw the error free ray diagram.

Students are able to elaborate the terminology of optics.

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

- Rules for drawing images formed by Spherical Mirrors

## DAY-10

Basic terminology/  
laws of current  
electricity.

To develop ability among the students to understand and correlate with the previous knowledge of current electricity with the high cognitive deductions and the concepts.

- Electric Current – Rate of flow of electric charge w.r.t time

The students will be able to understand the basic mechanism of flow of current and its relation with electric potential.

Students will also be able to differentiate the role of Electric Potential/Potential Difference and E.M.F.

# KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

- Ohm's Law – The current flowing through a conductor is directly proportional to the potential difference applied across its ends provided physical conditions remains unchanged.
- Resistance – Opposition to the flow of current
$$R = \frac{V}{I}$$
- Terminal Potential Difference – The potential difference between the terminals of a cell in closed circuit ( i.e. when current flows through it )
- EMF of a cell - The potential difference between the terminals when no current flows through the cell (i.e. in an Open Circuit)
- Electric Energy – The total work done ( or energy supplied ) by the source in maintaining current in circuit for a given time is electric energy consumed in circuit.  
Electric Energy = Work(W)= V X Q = V X ( I X T)= V X I X T
- Electric Power – The rate at which work is done by source in maintaining current in circuit is called electric power.  
Electric Power = W/T = V X I

## KENDRIYA VIDYALAYA SANGATHAN, LUCKNOW REGION

- Concept of Magnetic Field – The space around a current carrying conductor in which its magnetic effects can be experienced is called Magnetic Field.
- Lorentz Magnetic Force – A current carrying conductor placed in a magnetic field experiences a force leads to a conclusion that charges moving in a magnetic field experiences forces.  
Force experienced by a charge is

$$\vec{F} = q\vec{v} \times \vec{B}$$

### For Practice :-

1. Calculate the no. of electrons crossing a given cross section in 1 sec to constitute a current of 1A.
2. Battery of EMF 10 V and internal resistance  $3 \Omega$  if connected to a resistor. If the current in circuit is 0.5A, find
  - (a) The resistance of resistor.
  - (b) Terminal voltage of battery.
